

## Student's Personal report on E-learning and Flipped Classroom Activities (IO4)

**Student's name and surname: Ioan Nicolae Almasan**

**Class: 4D**

**Institute: I.T.I. G. Donegani**

**Country: Italy**

**Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)**

The topic that I've chosen to study at home is "Water Pollution", with a special mention to "Water Pollution in the aquatic and terrestrial food webs". Water pollution is a big problem for humans but also for animals. The contamination of the water makes it unusable for drinking, cooking, cleaning etc... Also the pollutants that you can find in the water may cause disease or act as poisons.

**Comment about the activity done at home (at least 300 characters)**

I'm going to be honest, the activity I did at home by my own wasn't a masterpiece, but with all the thousands tasks that I had to do, I tried my best... I've chosen the topic of "Water Pollution " because I see something worthwhile in it. I don't think that water is important just because we need it, but because we are water. ( In fact the human body is made by 60% of water). I found most of the information on the Internet. Despite the other activities (inside and outside the school) I really enjoyed studying this topic and I hope that one day people like me will do the same.

**Comment about the interactive activity in the classroom (at least 400 characters)**

For me the interact activity was an amazing experience. It really helped me with many things, such as my pronunciation and my spoken English. I had the opportunity to learn a lot of new "skills" and study topics that I had never heard of before. I had the opportunity, like someone else said, to meet new people and make new friends. This activity has also opened my eyes about all the problems we can find out there. I met people that are really into finding solutions for all this problems. They're very motivated and now, more than ever, I'm motivated too.
